Hi Gil & Ariel
Glad to be e-introduced to you. Sorry for the late response. I'm in the Far East on my way to NY. Will be home on Nov 18th for several days. Ready to set a meeting asap. Are You in IL that week? If so we can meet on
Tues, Nov 19,11am at my place ,G Tower, 1 Sderot Shaul HaMelech, 4th fl
Tel Aviv.
Pl let me know whether this works for you.
Looking forward
EB

>
> Some background about Ariel:
> After Aram course, I was a technological researcher in the army, of both hardware and software projects for a year and a half, and then went to officers course. Immediately afterwards for the next year and a half I was tech lead and eventually another 2 years leading a team of researchers in the same unit. After the army I started to work in a small start-up named Lucid Logix, where during a period of 6 years I led the hardest technological research we had there on all aspects. On the same time I did my first and

second computer science degrees, and most of the Phd, which I should finish (hopefully) this year. Around 1.5 years ago I joined Gil and the rest is history.

Just a side note that Ariel was with Nimrod in same sub-unit, and Gil was at another sub-unit in 8200.

By 2012 we founded North-Bit together with a third guy from 81, who left by now in favor of a startup company with another friend...
The idea was to do cyber but once things started, we realized it is not as easy it looks, bureaucracy related.

North-Bit is a boutique research company. We are five persons today, 3 employees (1 full time, 2 students). We started the company without any funding and bootstrapped all the way. We only accept research oriented projects, the harder the challenge is, the better. Obviously most research projects have some development along the way too, and we don't shy away. So far we have never failed our clients with projects we worked on, we are totally success-oriented. Among our clients you can find a few Israeli startups and the biggest is Conduit (#1 Israeli Internet company, similar to Babylon), for which we did their flagship project which requires lots of research in the world of web-browsers. We also work closely with Yuval Diskin and co, and we did amazing stuff with them, computer-forensics mainly (analyzing malware, hack some organization for tests(!), and lots more).

All this time after starting the company we were looking to partnership with someone who knows the business world pretty well and that we could team up and rock the world. I haven't mentioned any Cyber project because we didn't agree to work with anyone in this field for various reasons although the payment was huge (by the millions of dollars too). And so many people approached us already.

Today after one year of the company activity we did more than $1 million, and this is mostly by selling our time. We are now trying to leverage our connection and make some big opportunities come true.

Anyway, this is just a medium sized background about us. :)
We would actually be happy to meet you.

Just to be clear, our added value is that we got experience in this specific field and we believe we are one of the strongest teams in the world, with great execution abilities too. And we speak human too! We don't have a website because we are just too busy working and not fooling around.

Sincerely,
Gil Dabah & Ariel Shiftan
